

ADTRAN® IP SoftPhone

Version 1.1 for Windows

Benefits

- Supports multiple SIP accounts and six simultaneous call appearances
- Offers the mobility and flexibility to place or receive calls from any Internet connection
- Compatible with most VPN configurations
- Shortcut keys allow the use of a PC keyboard to dial numbers
- Import or export contact lists
- Maintains detailed call history with phone number, timestamp, and call duration
- Double-click any call history event or contact to initiate a call
- Quick access to contacts and call logs via slider drawer
- Message waiting indicator
- Flexibility to select any audio device installed on a PC (USB headset, PC speakers, etc.)
- Conference up to six simultaneous calls
- Easily transfer calls or place phone in 'Do Not Disturb' mode
- Mute and speakerphone buttons
- Audio-tuning wizard ensures easy setup
- Speaker and microphone volume controls for PC speakers and USB headsets

The ADTRAN IP SoftPhone is an intuitive software application designed to enable Voice over Internet Protocol (VoIP) communication from your laptop or desktop PC and works seamlessly with ADTRAN's IP telephony product lines.

The IP SoftPhone is easy to use and offers a built-in audio tuning wizard that helps simplify setup. Any audio devices available to the host PC such as USB headsets or PC speakers can be used with the SoftPhone. The "Speaker" button offers single-button selection to switch between headset or speaker phone devices.

The IP SoftPhone offers six call appearances with conferencing capability and other familiar features like transfer, hold, do-not-disturb, and a message waiting indicator. These features offer mobile employees many of the same convenient capabilities they enjoy when in the office.

The ADTRAN IP SoftPhone improves productivity by enabling users to have quick access to their address book and call logs to identify recently received calls,

missed calls, and dialed calls. The ADTRAN IP SoftPhone can be configured using the same extension as the user's office phone or as a completely separate extension.

By using Virtual Private Networks (VPNs), remote and mobile workers can use the ADTRAN IP SoftPhone with any Internet connection and be confident that the voice and data traffic is secure and private. VPNs provide encryption and ensure the security of the data and voice traffic between the corporate network and a remote office Internet connection or wireless hotspot or hotel broadband connection.
